Subject: 175 Stanley Road comments and concerns about the future of the Trent System

I attended the meeting the committee had in Bolsover.

I am concerned about the dead carp floating around on our water front. In the last five years we have not been able to use the chemical that kills our weeds, we have become invested with weeds and mosquitoes. Six years ago when we moved to Stanley Road we could fish off our dock. There is no longer any fish, only dead carp. The prop on our boats are continually being ruined from the weeds. It is just a matter of time until someone on our road gets the West Nile Virus. The mosquitoes love to live in the weeds on our waterfront it is a breeding ground for them. I do not even want to go swimming anywhere on the Trent because of the weeds and the dead carp, what is killing them, maybe it is infectious to humans.

Further to my comments when the government put in the bridge in bolsover our water levels decreased dramatically our neighbour who has been on Stanley Road for years says they could go swimming off the dock. It was deep and whatever they did when the bridge went in it pushed all kinds of silt on the bottom and now you can not even stand in the water.

Regards,

Heather and James Smart
