Subject: Eels Lake Levels

Dear Panel Members,

We are relatively new cottage owners on Eels Lake (May 2006), and although we were aware of the drastic changes in the water levels before purchasing, there are still some concerns, as to the effects that these changes have ecologically as well as the hazards to boaters.

We have reviewed the submission from the Coalition for Equitable Water Flow, and find that they have raised the same issues as we often end up discussing, and we whole heartedly agree with and support they're concerns.

We would like to suggest that there seems to be excessive draw down on Eels Lake, and hopefully there will be a fair solution, and also perhaps a schedule as to when the draw downs will take place so that people are prepared and property damage can be minimized.

Thank You

Tim Tanner and Donna Eden.
