**Subject:** Water levels on Eels Lake

As a cottager on Eels lake, we have noticed the huge change in water levels as the summer progresses. We encourage policies to be put into effect which would limit the the water levels in the lake from dropping so drastically. The effect is huge on both people living on the lake and many species which are impacted with the wetlands drying up around the inlets of the lake. Cottagers contend with their docks being damaged due to being beached on jagged rocks in a short period of time and boats are damaged with shoals rising up to the surface of the lake. Hopefully our concerns will be heard and the levels in the lake will not be fluctuating to such a high degree from spring to fall.
