Subject: Eels Lake Water Levels

Dear TSW members:

In the fifty-four years the Weir family has been on Eel's Lake, people the world over - from New Zealand, Australia, France, The U.K, The U.S.A, and numerous parts of Canada, have enjoyed the special ambiance that is part of cottage life in this area of Canada.

A major aspect of the continuing attraction has been the abundance of pure, clear water. No one has ever challenged the need of the Trent-Severn Waterway to draw down the reservoir lakes as the summers progress. What seems unfair and very unclear is why, in recent years, there has been such a cavalier attitude to the residents' concerns - in particular the neglect to be sure that the logs are in the dam prior to the spring runoff, which has consistently resulted in extremely low water levels. The good management of our water systems is both helpful and beneficial to all in the long run.

The wonderful memories of Eel's Lake, held by many around the world surely should be heard and valued during your deliberations.

Respectfully submitted:
Marc Marsh and Vicky Weir-Marsh

Weirs Island, Eel's Lake
